### **Largest New Mexico Water Utility Relies on Xylem Pressure Management Data to Improve Operations**

*Sensus Pressure Profile Application Enables Proactive Customer Service for Albuquerque and Bernalillo County*

**RALEIGH, NC (July 26, 2022)** – Residents in New Mexico rely on uninterrupted water service to beat the desert heat. The state’s largest water utility is on a mission to meet and preempt the needs of its customers by using smart digital solutions.

“When it comes to water pressure management, proactivity is key,” said Joel Berman, chief engineer of the [Albuquerque Bernalillo County Water Utility Authority](#). “We keep our customers happy by remotely monitoring their water consumption and pressure to ensure any potential issues are identified before they experience them.”

The utility began deploying advanced metering infrastructure (AMI) from [Sensus](#), a Xylem brand, in 2011. Most recently they’ve added another layer of technology to continuously monitor and manage water pressure in near real-time from their computers. The cloud-hosted Sensus Analytics [Pressure Profile](#) application receives reports from [ally](#)® residential water meters via the [FlexNet](#)® communication network to collect water pressure data.

“This technology has taken many steps out of our typical pressure management process, including administrative tasks and truck rolls,” said Patrick Bayardo, an operations and maintenance superintendent at the Water Authority. “Now, we simply log into the website in the morning and the data is right at our fingertips. It’s a big time-saver for us.”

The Water Authority also uses the battery-powered [Sensus](#)® [Smart Gateway Sensor Interface](#) at pressure-reducing valve sites to monitor water distribution system performance. The

application's integration with FlexNet allows seamless data collection that is then aggregated into map-based graphs that visually depict pressure zones and levels within the community at any given time. Automated alerts notify utility crews when pressure deviations occur, and they can begin investigating the situation from the convenience of the Water Authority offices.

"The application is really a plug-and-play system. It's a seamless solution that our technicians have adopted, installed and programmed without third-party assistance," said Berman.

The adoption of Xylem technology has resulted in tactical shifts for the service provider to continuously improve operations.

"I'm proud to say that in the last decade we've collectively transitioned from being reactive to highly proactive with regards to water distribution pressures. These days, if we don't identify an issue before the customer, something is wrong. It's not just about monitoring the pressure; it's about changing the way we do business," said Berman.

Those changes save the staff time and can lead to quicker repairs. "Now we can pinpoint areas and resolve potential water issues within hours in what used to take weeks," said Bayardo.

To learn more about how Xylem technology has aided the Water Authority's tactical approach to water pressure management, read the full [case study](#).

### **About Sensus**

Sensus, a Xylem brand, provides remotely-managed products and solutions that deliver the right data at the right time for investor-owned utilities, cooperatives and municipalities. As part of Xylem's digital portfolio, our smart devices connect with a variety of communication technologies to help customers make timely decisions that optimize electric, gas and water systems.
