

Sensus Employee Receives Prestigious AWWA George Anderson Award

Jack Jackson praised for his innovative designs in water meters

RALEIGH, N.C. (June 21, 2012) Jack Jackson, a 37-year employee of [Sensus](#), received the [American Water Works Association](#)'s (AWWA) George Anderson Award at the association's annual conference and exposition in Dallas. The award is given to an individual who actively advances the science of [water meters](#) through design innovation, meter operations, management or training of others.

Jackson developed many of the Sensus meters and technologies used by hundreds of utilities around the world. He has created the curriculum for and taught courses on large meter testing for water works employees, Sensus customers and distributors.

"Jack is an amazing visionary and designer and has an unmatched dedication to the water industry, said Sensus executive vice president Mike Tracy. "In addition to his technical contributions to the industry, he provides outstanding customer service around the clock. He also openly shares his industry knowledge and wisdom with the AWWA committees and with new personnel in the water works industry."

The George Anderson Award was established in 2003 to recognize outstanding long-term contributions by user members, consultants and manufacturers to the field of water metering. The award is named in honor of George Anderson. George originally achieved an industry reputation by conducting "Road Shows" throughout North America in the 1960-70s. George's specialty was large meters and particularly Class II turbines, a new technology at the time.

About Sensus

Sensus is a leading utility infrastructure company offering smart meters, communication systems, software and services for the electric, gas, and water industries. Sensus technology helps utilities drive operational efficiency and customer engagement with applications that include advanced meter reading, data acquisition, demand response, distribution automation, home area networking and outdoor lighting control. Customers worldwide trust the innovation, quality and reliability of Sensus solutions for the intelligent use and conservation of energy and water. Learn more at www.sensus.com.
