

Stratus: Elevating Smart Metering

With groundbreaking metering technology from Sensus, utilities can capture and analyze data that provides intelligence at the edge of their systems for unparalleled efficiency and responsiveness.

The Stratus® residential meter delivers more data than any other product on the market to ensure the safe, accurate and reliable management of the electric grid. Combined with true two-way communications on the Sensus FlexNet® network, utilities and municipalities can instantly configure, upgrade and customize the meter's electricity management platform.

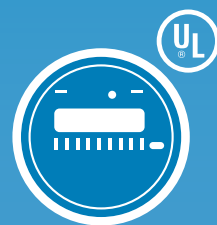

Additional testing for Stratus

Standard testing for all meters

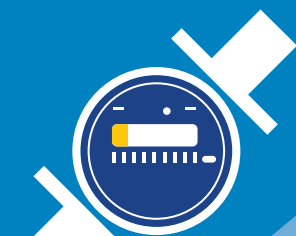

ANSI Testing

The American National Standards Institute (ANSI) oversees the development, distribution and implementation of U.S. standards and guidelines for the electric utility industry.

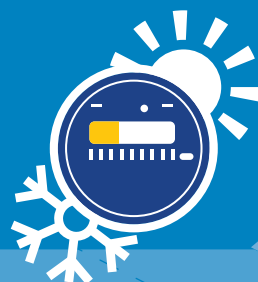

UL Testing

Underwriters Laboratories Inc. (UL) provides safety-related certification, validation, testing and inspection services across a wide range of industries, including electric utilities.

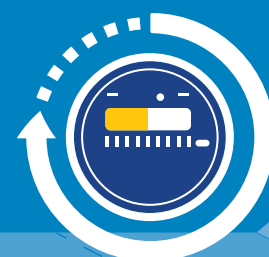

Highly Accelerated Life Testing (HALT)

Intense stress-testing methodology determines meter reliability and exposes design and process weaknesses.

Temperature/Humidity Testing

Tests measure minimum and maximum values for temperature, humidity and voltage to ensure meter functionality.

Endurance/Long-term Testing

The Sensus outdoor meter farm measures long-term performance against airborne contaminants and runs lifecycle testing at -40° C, ambient temperature and +85°C, as well as no load to 200 amps.

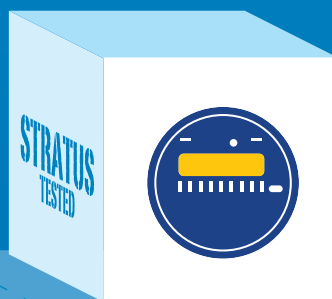

Hot Socket/Overvoltage

Stratus meters are tested to perform against hot sockets, internal heating and overvoltage incidents to ensure protection.

Water Intrusion

Weather tightness is tested against gutter downspout, direct water insertion and wind-driven rain, establishing resistance to intrusion caused by wet weather and other factors.

Stratus is the only meter on the market today to successfully complete-and pass-all these rigorous tests, making it the new standard in electricity meters.
